

Dr. Huang Guang Ping
Division of Orthopaedic Trauma
Visiting period : 1 July 2017 – 31 December 2017
Working Hospital : Orthopaedics Department,
Jianyang People's Hospital, Sichuan province

Learning and working report in QMH

I come from Chengdu, which is the capital of SiChuan Province. Six month ago, I came here to be a trauma clinic fellow. I am very honored to have the opportunity to study here, this is a unforgettable experience in my life. This experience not only broadens my horizons, but although updates my medical knowledge. In addition, Hong Kong's different cultures left a deep impression on me. Time always go fast, the leaving time is coming. At the moment of leaving soon, there are many things wanting to say.

First, I would like thank Professor Leung and the trauma team, as well as the department secretary Doris, the operation theater nurses and other staff, who have given me a lot of help. Professor Leung is a respectable teacher. He taught us knowledge, influenced us how to be a good doctor through his own good behavior, treated us friendly get along with us equally. In addition to these, he very takes care of my life in HK. On the weekend, he took me to the well-known tourism place of HK, to climb the peak mountain. The member of trauma team, such as Dr. TW Lau, Dr. C Fang, Dr. D Yee, Dr.

T Pun, they are well experienced in surgery skills, they always friendly and patiently explain my question. Besides, the department secretary, Doris is very kind. She always prepared well the documents we needed, saved us lot of troublesome. So, I want take this moment to express my appreciation for what you have done for me.

Second, I have learned a lot of new knowledges, from the management to the surgical skill. First of all, close teamwork, advanced concepts left a deep impression on me. I underwent ward round following Dr. D Yee, took part in surgery very day. The teamwork performed with good sharing and cooperation, the work is very efficient especially; the “clinical pathway” of hip fracture is a very effective method in treating hip fractures in the elderly. This makes sure the patient can be treated timely and appropriately. In my hospital , I think there is a gap compare with that in Queen Mary hospital .Secondly , the advanced minimally invasive concept greatly opened my horizons and renew my concept. I also observed the outcomes of minimally invasive surgery. The patients recover more quickly and had less harm to the body. I think I have also learnt lot of minimal invasion technique. I believe my study will help more patients when I come back to

my hospital. Finally, rehabilitation is a highlight worth noting. In my previous work, we ignored or didn't attach much importance to rehabilitation. I hope I can help my hospital to make progress on this area. I also learnt about 3D print technology from Dr. C Fang. 3D print technology is a wonderful technique to make complex operations easy.

Third, the education and training of medical students is yet another huge gain. Our hospital is also a teaching hospital, responsible for training more than 100 medical students each year. Queen Mary Hospital has a rich and advanced experience in student education. I attended case discussions, case meetings, and trauma rounds. There are many teaching experiences which are worth learning from.

Of course, there are more places worth learning, because of time constraints; I had to return to my hospital. I will never forget this wonderful time spending in Hong Kong and will never forget the help given by Queen Mary Hospital of Hong Kong University. Thank you again sincerely !

Kind Regards

Dr. HUANG GUANGPING
