

Fellowship Ending Report - Division of Sports Medicine and Arthroscopy

By Dr Gaurav Sanjay

As I leave Hong Kong I want to thank the department of Orthopaedics and Traumatology, Queen Mary Hospital for having me here for almost 6 months from 22nd July to 31st December 2016.

I will take along with me fond memories of the department and new things which I have learnt over the past 6 month.

I want to thank my division head Dr. Wai Pan Yau for allowing me to work under him and his team. I have learnt how to be more meticulous and learnt many tips in arthroscopic surgery under his able guidance. He had also instilled the basic concepts of clinical research during the period. I had been actively involved in collecting data for my research project for meniscal repair and also assisted Dr. Yau for his ongoing research in ACL and rotator cuff with strontium cement in rabbits.

I indebted to my colleague Dr. Amy Cheung who had supported and helped me immensely as a colleague and a friend.

I would like to thank my other colleagues Dr. Arthur Lo and Dr. Anderson Leung who had worked with me during the last six months and Ms. Doris Lau who had made the entire process of the fellowship programme to be conducted very smoothly.

The working of the department is very smooth the credit of which goes to the head of the department Prof. Kenneth Cheung.

The Wednesday clinical conference is an excellent academic activity specially for the residents and also for the rest of department as it a good way to refresh your concepts.

Hong Kong is a beautiful place with friendly and hard working people.

Thank you for the opportunity.

Regards,

Dr Gaurav Sanjay
