

My name is Hazelle Nevada Yau. I am a secondary four student from Diocesan Girls' School. I am a sixteen years old Chinese girl. Despite my lack of participation in more athletic activities, I have always been rather interested in the way the human body functions. This is related to my interest in cartoon drawing and the production of animated clips.

From the books that I had read, I learned about the basic anatomy of the human body, but I was never able to witness for myself how damage to some of the seemingly most simple parts could lead to severe injuries. During my clinical attachment at the Department of Orthopaedics and Traumatology, Division of Sports and Arthroscopic Surgery, I was permitted to see for myself the patients who had suffered these seemingly small but crucial injuries, as well as how the doctors and surgeons were able to identify these injuries through a process of elimination and improve their condition.
